

Quality at Nicopure Labs

Hosted by: Daniel Morgan, PhD
Quality Assurance Director

Nothing herein shall be interpreted as legal advice to any party.

What is Quality?

- Quality is about developing and delivering a product which meets or exceeds the consumers expectations.
 1. Quality Starting Materials
 2. Consistency
 3. Reliability
 4. Value
 5. Taste

Quality Starting Materials

- Vegetable Glycerin and Propylene Glycol
 1. USP Grade or higher
 2. Ensure no ethylene glycol or diethylene glycol
- Nicotine
 1. USP Grade or higher
- Flavorings
 1. Generally regarded as safe (GRAS)
 2. Ensure no diacetyl or acetyl propionyl

Quality Formulations

- Ensure consistency and reliability through:
 1. Formulation recipes
 2. Formulating SOPs
 3. Filling SOPs
 4. Labeling SOPs

Quality Assurance

- Ensure consistency and reliability through:
 1. Quality Processes
 2. Manufacturing SOPs
 3. Quality Manual
 4. Ensures Proper Training
 5. Vendor Audits
 6. Internal Audits
 7. Review of Vendor CoAs

Quality Control

- Ensure consistency and reliability through:
 1. Testing of Raw Materials
 2. Testing of Final Products
 3. Generating Product CoAs

Commitment to Quality

- There are various operative definitions of quality. Some define quality from a strict product angle, while others associate it with controlled manufacturing. Many perceive quality as a function of subjective consumer preference, and yet another school of thought ties quality to value-per-price.
- At Nicopure Labs, we strive to not only meet, but exceed all standards when it comes to the quality of our products. From product concept to consumer satisfaction surveys, the attention to quality permeates through all of our actions.
